Daslos Studios – School Lunch Program Overview

Daslos Studios LLC now offers a package for school lunch programs. This solution is customized for your specific needs, but allows the entire school lunch ordering and reporting system paperless and online. This exciting expansion will greatly reduce overhead and allow students and parents to easily make orders and school administrators to get real-time reporting on the orders. Parents are also able to pay for their orders online! Let’s go through some of the main features.

Website Integration – There is no need to learn a new system or make your students and parents go to other sites. We can incorporate the meal system directly into one of our new websites, using secure login and account management. Already have a website? We can create a secondary website that sits aside yours with a similar look and feel that will contain the lunch program.

Monthly Programs – Split your meals into monthly or bi-monthly programs so you can more easily control the orders as well as specify cut off dates for both new orders and changes to existing orders. After the cutoff date of particular program students and parents will be still able to view their orders online and print off quick schedules to remind them what they are to have on a particular day. Administrators will still be able to make changes should the occasion arise.

Dynamic Meals – Enter unlimited meals into the system with options and additional costs for extras on each meal. Your meals also may include a detailed description including photos. The price for each meal is independent of each other, allowing changes along the way. Students and parents may order a single order per day per student, but may alter those changes at any time until the cutoff date for that monthly program.

Simple Order Process – A user friendly interface allows parents and students to quickly scan through the meals and make their order. Each meal has a full description and a simple checkbox. An order review box makes it simple to get the total price for all the orders and an overview of what changes you may be making if you are editing an existing order.

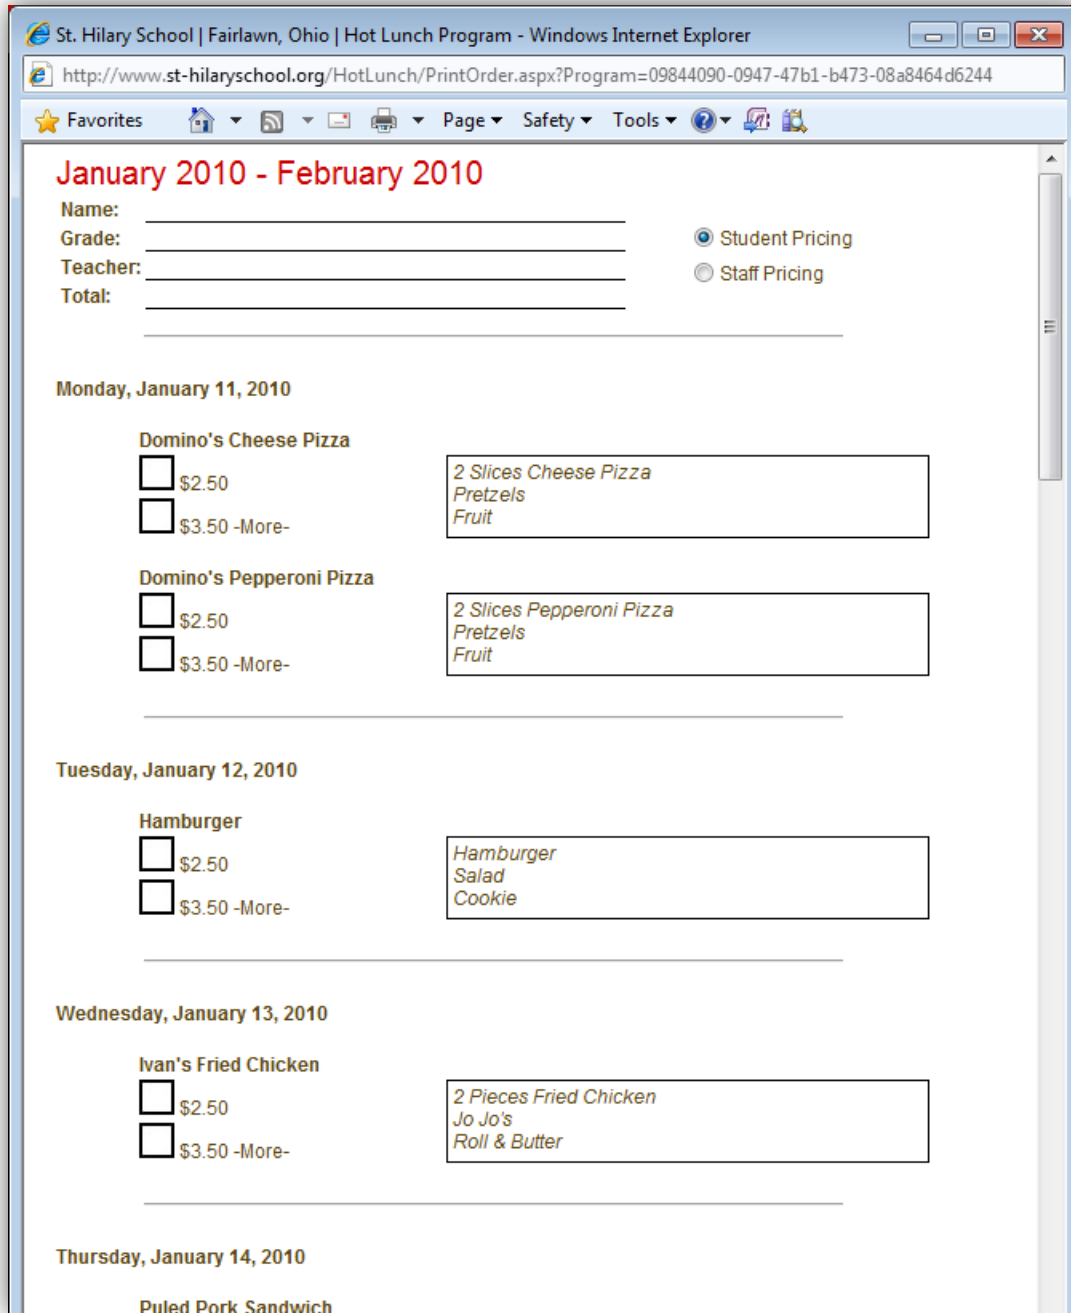

The screenshot shows a web browser interface for the 'St. Hilary Hot Lunch Program | Order Form'. The top navigation bar includes links for Home, About St. Hilary, News, Calendar, Student Life, Parent Resources, Alumni, Interactive, and Contact Us. The main content area is titled 'Hot Lunch Order - Hot Lunch - Home' and features a 'Welcome back James' message with a 'Logout' link. On the left, there is a 'January 2010 - February 2010' calendar icon and a section for selecting the order recipient, with 'My Staff Account' selected. Below this is a 'Print Order Form' button. The central 'Available Meals' section lists options for Monday through Friday, including Domino's Cheese Pizza, Domino's Pepperoni Pizza, Hamburger, Ivan's Fried Chicken, Puled Pork Sandwich, and Pizza Hut Meatball Sub, each with a price and a 'more' link. On the right, there are four yellow buttons: 'HOMEWORK CENTRAL', 'ACCOUNT SETUP', 'HOT LUNCH', and 'CLASS LISTS'. At the bottom right, a 'Change Review' pop-up window displays a summary: Total New Meal Orders: 4, Total Removed Meal Orders: 0, Total Changed Meal Orders: 0, Total Price Change: \$8.00, with 'Update Order' and 'Submit Order' buttons.

Accept Payments Online – Parents are able to quickly and easily see what their total fee is for the orders of all their children and pay online using a major credit or debit card. Online payments are a real time saver for your staff by reducing the trips to the bank, stacks of checks and cash. Parents prefer the time saving and reward points by using their cards as well. We process online orders using the secure PayPal payment system.

Printable Order Form – There are parents who remain uncomfortable with E-Commerce or using online systems, regardless of the security we use. To easily accommodate these users, a printable order form is available on the website as well.

Puled Pork Sandwich

Billing Accounts – Each student and staff member receives a billing account, which contains the current balance that is due to the school. Parents with multiple students will be able to see the total balance due for all their children and either mail in a check or pay online using a major credit / debit card. If a student or parent changes an order after paying, or has a positive balance due to absence or snow days, the positive balance will carry over and be counted as a credit the following month program. The system is simple and works like a credit card. Charges are made on a user account when purchasing meals and the balance is reduced or removed when a payment is entered. User friendly administration tools allow for quick reporting and administration of all accounts and analysis.

Advanced Reporting – We understand that a system like this is only as good as the reports that it can generate. We have built several reports with the system which will enable a clear view into all aspects of the system. Remember this is a custom solution, not a boxed product. Should you require a specialized or custom report for your particular setup, we can customize reports for you based on your requirements. We want to remain as dynamic as possible to accommodate growing changes and requests.

Class / Grade Reports – Staff will be able to receive quick reports on student’s meals for either a single day or a full monthly program. These quick reports are easily printable and are dynamically generated by class, teacher, or grade.

Program Summary Report – Numbers are vital to keep a program as complicated as a school lunch program running smooth. The program summary report offers a quick look into all the meals of a particular program. The totals for each day and meal along with a totals summary are included.

Pancakes	316	0

Staff Meals – Faculty and staff will be able to access the same system. Pricing for faculty and staff can be set to be different or discounted, and works easily alongside regular student accounts for staff with children in the school.

Multiple Groups – While faculty and staff may be very common, the system is built to handle other groups as well. Regardless of the group, you may assign accounts in the system to it and establish custom and special pricing for meals.

The screenshot shows a web application interface for managing 'Hot Lunch Groups'. At the top, there is a header with a logo of two stylized figures (one blue, one yellow) and the text 'Hot Lunch Groups'. Below the header, there are two tabs: 'Details' (selected) and 'New Group'. On the left side, there is a section titled 'Current Groups' with two radio buttons: 'Staff' (selected) and 'Student' (unselected). The main content area contains a form with the following fields: 'Title' (set to 'Student'), a text area for 'Summary' (containing 'Hot Lunch Group for Students'), 'Default Meal Cost' (set to '\$ 2.5'), 'Default More Cost' (set to '\$ 1'), and 'Active' (radio buttons for 'True' and 'False', with 'True' selected). At the bottom of the form, there are two buttons: 'Save Changes' and 'Delete Group'.

Vendor Tracking – Meals may be quickly assigned to be provided by a particular vendor allowing for quick reporting for quantities needed for any particular day.
