I. Introduction

Thank you for the opportunity to present this proposal.

Daslos Studios LLC is a small website development firm based out of Medina, Ohio. From its' foundation in 2004 by James Murawski, the company has been dedicated to providing small businesses with the tools that they need.

We believe that both large and small businesses have a real need for an online presence and the online tools to set themselves apart. The way that the technology and business world is moving, your website is just as important as any other marketing program that you might have.

You are aware of this yourself, as you are looking to have Daslos set your company apart from the competition online. We are going to be helping you through the lifecycle of your project and into the future. Consider us a valued business partner who is indeed interested in the ongoing success of your company. We will be there to answer your questions about your site, best practices, ideas for growth, and future technologies.

We are Daslos Studios LLC and we will make your website a success!

Measuring past your expectations!

Trimble Nomad
The new Trimble Nomad packs even more functionality into the most powerful and full-featured rugged handheld computer available. Start with an 806 Mhz processor, 1 GB of flash storage, a long-life battery and integrated wireless capabilities like GPS, 802.11b, and Bluetooth. Then select an optional integrated laser bar code scanner and color digital camera. MORE

About Us
Elkins Earthworks, LLC, is an environmental equipment firm specializing in the measurement of landfill gasses for the Solid Waste Industry. Our office is in Medina, Ohio located near Cleveland. At Elkins Earthworks our landfill gas field monitoring equipment is built for the technician and the project managers. We build smart monitoring equipment. We have integrated up to date technology such as Bluetooth, 802.11, GPS, bar code scanners and digital cameras into our field monitoring units by the use of ruggedized handheld PDA's from Trimble. Elkins Earthworks is an Authorized Trimble Business Partner. Trimble is a leading provider of advanced positioning solutions that maximize productivity and enhance profitability. We are authorized to sell the best known products and GPS technology made by Trimble. Trimble integrates a wide range of positioning technologies including GPS, laser, optical and inertial technologies with application software, wireless communications, and services to provide complete commercial solutions. Its integrated solutions allow customers to collect, manage and analyze complex information faster and easier, making them more productive, efficient and profitable.

Welcome James Murawski

Not James? Profile Logout

Service Schedule

Sundays: 8 AM and 10:30 AM (September through May)

Sunday School & Bible Class: 9:00 AM (September through May)

Join us in worship this Sunday.

SUMMER SCHEDULE: From June through the end of August we will have one service each Sunday at 9:30 a.m. with a Coffee/Donut or Something-Else-Good-To-Eat Fellowship which follows.

No Saturday Services this summer.

Pastor's Message

It's Up There, isn't it? This wasn't the exact fire escape and, in fact, I believe ours was bigger. It was the old fire escape on the outside of Hazeldell Public School off East 124th Street in Cleveland. The school was right across the street from where we lived. During the summer my brothers and I would join the torrent of bored *out-of-school students* and play the game of *Five Escape Tag*. I shudder when I think of the dare devil stunts we did as we played the game of tag two and three stories above the hard pavement of the playground below, running across steel beams that were merely three inches wide. We'd jump from one fire escape to the next, never giving the slightest thought of what would happen if we slipped and fell to the ground. God surely watches out over *old fools and children*.

Our children have no idea what fire escape tag is, and for that I am grateful. But, as the first days of summer vacation bore out for the kids at our church -- two of whom suffered broken limbs before the first day of summer vacation was through, danger is not far from any of them. Parents these day have to be especially vigilant in watching their kids from dangers that didn't exist when a lot of us were children.

I would suggest that parents hone up on their skills of vigilance by looking over an internet site such as [Protect Our Children Web Link](#). This and other site's like it are helpful in reminding us of some of the little things we can do to keep our children safe.

LEARNING for a LIFETIME
is a CARE and CARING place for ANY Christian family.

A welcome from Mrs. Lucarelli:
Teaching about Jesus is one of the significant things that sets Lutheran schools apart from public schools. The teachers and students witness personally and publicly to their faith in Jesus Christ by how they treat their classmates, are accountable in their duties, and in their personal lives. Our teachers not only teach from the Lutheran perspective in class, but integrate our faith into every subject taught and every activity.

The teachers and I pray daily for our students and our own personal spiritual life to be filled with the Holy Spirit. We pray that all will listen to His words, and do as He instructs so we can give glory to God in all we do. "Life in the Spirit helps Christians find kind words to say in a gentle manner with a forgiving spirit, knowing that it is the very children of the Father with whom we speak. The Spirit helps us understand that our focus is not on the things of this world that will pass away, but on things of the spirit that will not pass away."

St. Thomas Lutheran School is prepared to be a blessing to you and your children. With Christ-centered education, we not only strive to achieve academic excellence, but we also work to assist parents with the spiritual training of their children since it is critical that we work together as a team. If you have questions or need further assistance, do not hesitate to contact us by e-mail or phone at 440-331-4426.

"Train up the child in the way he should go, and when he is old, he will not depart from it." Proverbs 22:6

St. Hilary School

www.st-hilaryschool.org

The screenshot shows the St. Hilary School website. At the top, there is a navigation bar with "Log In | Register" and "ST. HILARY SCHOOL". Below this is a banner area with a "Welcome to the St. Hilary School website, your one-stop source for school-related information!" message from the principal, Dr. Nugent, and a "READ MORE" button. The main content area is divided into several sections: "IN FOCUS" with news about awards and a tour; "UPCOMING EVENTS" listing a Scholastic Book Fair and a soccer pre-registration; "TODAY @ ST. HILARY" with a list of recent posts; and "HOMEWORK CENTRAL", "PARENT'S DESKTOP", "ABOUT ST. HILARY", and "SIGNUP FOR UPDATES" on the right side. A footer contains contact information: "845 Moorfield RD | Fairlawn, OH 44333 | P: 330.867.8720 | F: 330.867.5081 | Webmaster | privacy policy".

A footer contains contact information: "Faith in Site, LLC | P.O. Box 565 | Valley City, OH 44280 | Ph: 330.635.6861 | Fax: 866.941.4827 | info@faithinsite.com".

III. What should we be looking for?

Web technology is constantly changing and it is difficult for people not directly involved in the industry to understand both what is out there and what has value. Below are several things that any company should be considering while looking for a web development provider.

Solid Technology Foundation

Daslos Studios builds its' web projects with the best and most advanced tools on the market. We base our technologies on the solid foundation of the Microsoft .NET 3.5 framework and the powerful Microsoft SQL Server 2008 database engine. What does this mean? Building with these tools is not the cheapest way to build a website, however it is the best. We build your website to grow and believe in providing a core code foundation which has the flexibility to expand and grow in any direction that your company demands.

Excellent Design

We at Daslos Studios believe that even with the most amazing technology and features, if the site isn't visually appealing, people won't give it a chance. We have professional advanced web designers who understand that designing for a website is far different from designing for print. Our team will work with you to build a site and brand that will serve your company for years and years.

Expandability

What good is a cheap website if you outgrow it in a few years? What good is that investment in time and money? The development team at Daslos Studios strives to build our website core code in such a way that allows for expansion. With technology changing every day, it is important to have the ability to grow in different directions. Daslos will be there to support your web growth in any direction you may want to take it. Our team will be there to ensure that your website grows with your company.

Fresh Content

What good is it to build a website that you cannot fully control? With each of our web projects we include full and unlimited use of our custom built content management system called Spruance. Spruance allows your staff to update everything from text, to images and video. Take control of your website and eliminate continual IT costs with Spruance. Maintaining your site is a big deal and is essential to ensuring that your website is a success. We give you the tools in order to succeed and save you money.

Tools for the Job

Daslos Studios has created advanced tools which we include in our website packages. These tools will launch your site with commanding functionality and capabilities. Our standard website tools include everything from company news, dynamic calendar, event registration, unlimited page builder, membership, contact us, and so on... We can also add some more advanced tools such as online stores, blogs, and other custom tools to your site as well. We have the tools to make your website a success.

IV. *Technology Foundation*

Daslos Studios believes that a strong technology foundation is very important. Every day there are new tools and technologies created for the internet, and even more are outdated and die off. As with most things, there is more than one way to build a website. In fact, you could build a website in dozens of languages and platforms. Which one do you choose?

We believe that by choosing a solid technology that has stood the test of time and is clear to be the leader into the future will build the best website. We believe that the greater benefit comes by using technologies based on their value, and not on their cost alone. After all as a company expands in different directions, so should its' website.

Daslos Studios builds its' web projects on a Microsoft Foundation. Our sites are based upon the Microsoft .NET 3.5 framework, written mostly in C# and JavaScript. We incorporate other technologies into our sites as well. Some of them you might recognize, but they are all the top of their class.

Providing the data storage and recovery foundation is the powerful Microsoft SQL Server 2008. Each of our websites is database driven, meaning that the content visible on the website is completely up to date and highly upgradable. All of our sites are hosted on top class dedicated servers located in a secure and redundant data center. Our servers run on Microsoft Windows Server 2008 and IIS7.

What does all this mean? Daslos Studios is committed to bringing companies the best of online technology and the most powerful of tools on the market. This is not the cheapest way to build a website, but is the best.

We want to make sure that you understand that the important investment which is your company website is founded upon a solid foundation of software and hardware.

V. *How we build a Website*

Daslos Studios LLC incorporates the latest and most state-of-the-art technology in the development of our websites. We take pride that our sites are built upon such a commanding foundation where even the smallest of sites could easily grow exponentially without major revision.

The first step to building a website is the blueprint. We cannot get to where we want if we don't know the goal. The blueprint is a technical and operational document which breaks down the individual components of a website. Only after going through this blueprint can many of the fundamental structure and programming framework questions be answered. This is also where we finalize a contract and both parties agree upon price, scope, and timeline.

Once all this has been agreed upon, we move into the design. Our designers will create a picture of what your new site will look like and make that presentation to you. Upon your approval, our programmers will receive the design for the site and break that image into an HTML format. At this point, we have a picture of what the site will look like.

From this point on, the programmers at Daslos Studios LLC will turn a photo into a true web application. Our programmers build our sites upon the Microsoft .NET 3.5 framework and utilize advanced programming languages from C# 2008 to JavaScript. All of our sites are database driven and utilize the powerful Microsoft SQL Server 2008. Building websites from this strong a foundation means that the sites will be more stable, secure, and expandable. Our websites are hosted on our own dedicated Microsoft's Windows Server 2008.

Websites from Daslos Studios LLC are provided with a shared version of Spruance, our custom web administration tool. Spruance allows you, the client, the ability to actively take part in your web investment by making continual updates to content and media. From Spruance, you will be able to update text, photos, audio, and video. Spruance will also be the control point for much of the advanced functionality of the website including the contact management.

P.O. Box 565
VALLEY CITY, OH 44280
PH: (330) 635.6861
FAX: (866) 767.8157
INFO@DASLOS-STUDIOS.COM

Once the website is near completion we at Daslos Studios LLC will help you on the use of Spruance and a walkthrough of the site. You will receive Spruance training which will allow you to perform all the updates and take control of your new site.

At this point in time, the website will be on the net, however protected from the public behind a secure password. This will allow you the ability to fully test the site in a live environment as well as have plenty of time to input text and media into the site.

When the site is populated with content and you give the final seal of approval, we will remove the secure password therefore allowing the public to finally see the final product. Even after the site is live, you will have the ability to change the content at any time from any internet connection.

www.Daslos-Studios.com

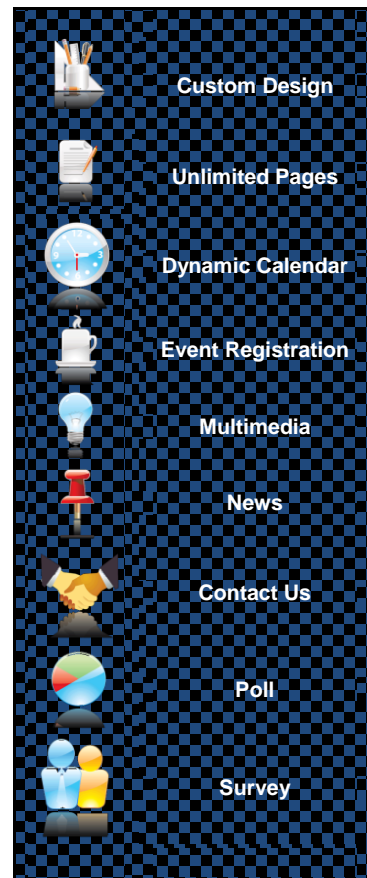

VI. Website Packages

Daslos Studios now offers several pre-packaged website solutions in order to make it simpler for our customers to get what they need. These packages are based on the most common solution configurations that we have created for existing customers and will continue to add more in the future. Along with these packages, we will customize a full solution or just add to one of these to make sure that your new Daslos solution answers all of your needs.

The Daslos Studios Small Business Package is our collection of advanced tools that any small to medium sized business needs in order to succeed. Stand tall above your competition online with not only the best tools on the market, but a stunning custom designed website which will help drive new business through your door.

This Small Business Package is 'Small' in name only. With this base system you will get all of the needed tools to start your website out right and to allow it to grow as your business does. We offer full multimedia, a dynamic calendar with an events registration module. You can add news items, a poll or survey for your site visitors as well. If you can think of other pages you want to include, like About Us, Our Staff, Our Services, etc; they can be built and posted to your website without 'Outside Assistance'. We will show you how to build these pages, how to hook them to your website navigation, and how to update any or all content during our training session. The tool that permits all of this flexibility is called 'Spruance' and is both powerful and simple to use.

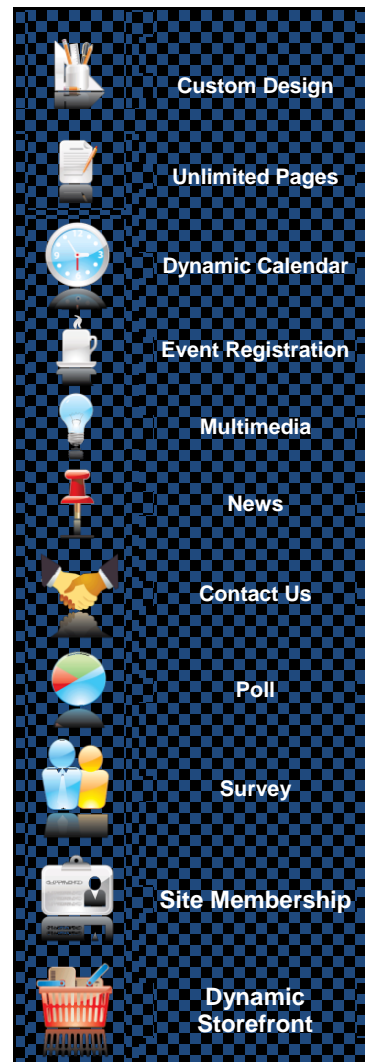

daslos STUDIOS
StorePackage

The Daslos Studios Small Business Store Package takes the small business packages and adds the tools needed for you to sell your product and make money online. Including advanced tools such as site membership and a dynamic online storefront, you will be all set to take orders online.

We know that you need to get your products out visible to your customers online in a clear and clean manner. Our storefront allows you to upload multiple photos of each item or even add other multimedia elements in order to support or demonstrate the product. The store was built with flexibility in mind, allowing custom categories and other customizable elements in order to answer all your needs.

Control of our storefront is easily found with our custom CMS platform called Spruance. From within Spruance you will be able to add, modify, or remove items and all other store changes. When orders are received from the website, you will be both notified via email and through a detailed report within Spruance. From order all the way through fulfillment, Spruance will be your one-stop tool in order to ensure your online selling success.

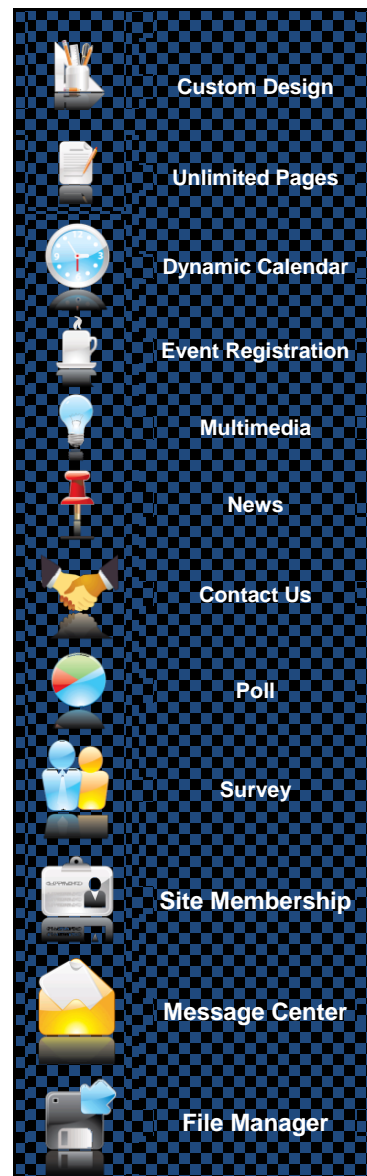

daslos STUDIOS
ExtranetPackage

The Daslos Studios Small Business Extranet Package is built for companies that are spread out. Increase your internal communication and collaboration with an internal extranet application for your employees. This package not only includes the public facing small business package, but also contains a vast secured area for your employees and partners. Share internal news, events, files, messages, and more. This is the best and most inexpensive way to bring your entire workforce together online.

The first of the new tools we bring to this package include the message center. This is an internal messaging system allowing private internal communication between one or multiple employees. Working much like Microsoft Outlook the message center ensures that the communication that you send to your employees or team members are delivered in this internal system securely and instantly.

The second new tool is the file center. We all know how much of a trouble it is knowing which version of a file is most recent, or where a particular file is located. With having your employees and team members spread across a great region, this tool is critical. Your authorized personnel are able to create folders and upload files to them. A strong security permission system makes sure that everyone's content is secured, while making it available to others to download, view, or print.

VII. Features

Custom Design

In order for your website to be a success it has to have more than just the advanced features and tools included in our packages. It has to look good with a clean, clear, and professional design. Our design team will create for you a new custom look that is yours only. Upon the start of any of our projects we will provide you a design survey with several questions designed to take that image you have for what your site should look like to our design team. They will then create a view of site with all the features, colors, and design elements for your review and approval.

We at Daslos Studios create not only a home or landing page view for you to approve, but also a view of another page like news, about, etc; to give you a better idea of what the rest of the site will look like. We also will show how the site navigation that you selected will look as well as show some of the content areas that will be displayed.

Unlimited Pages

With any of our packages you will have the ability to create an unlimited number of pages. You set them in the navigation, or link them from other pages. Don't think these pages are boring. On any page you can place images, files, video, or audio to bring them and your message to life.

Dynamic Calendar

Keep your customers informed about your sales, events, and other key dates. If a visitor clicks on any date on the calendar, the page will display the details from that particular day. Create recurring dates on the calendar, or even clone an event in order to save from redundant data entry.

Event Registration

The registration controller allows users to not only get details about an upcoming event, but be able to register online for it. You as the administrator have the control to specify things such as total number of tickets for the event, number of tickets per user, and extra questions for specific events. Along with all the capabilities registering your clients, this also incorporates advanced reporting on each event.

Multimedia

The multimedia page will be a listing of the video and audio files that you wish to show on the site. Along with this media you will also be able to include multiple photo galleries which you will create yourself through an easy to use editor in the Spruance Web Controller. The video, audio, and photo gallery tools utilize Adobe's Flash technology allowing the media to be displayed quickly even on slower internet connections.

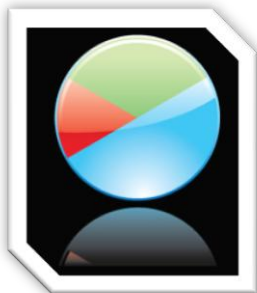

News

The news page will be a dynamic list of news stories including their title, date, and summary. Following each news item will be a "More" button which will send the user to the full article. This entire content will be controlled from the Spruance Web Controller, allowing you to display or hide articles, as well as feature articles on the homepage.

Contact Us

The contact us page will display your address as well as contact information for your company. This page will also include an online form which will allow visitors to enter comments or questions and send them to you via Email. Upon a submittal from the contact us page, that user's information will automatically be collected and added to the ever expanding contacts database.

Poll

Keep a good pulse on your customers and site visitors with a dynamic poll. Create as many polls as you want, in a variety of formats available. You will have the ability to either allow your visitors to see the results after they have taken the poll, or keep them confidential for yourself. Either way, this is a great way to get quick interaction with your visitors.

Survey

For when a simple and single question just won't do, create for your customers and visitors a dynamic online poll. Create as many questions as you want, in a variety of formats. You may either make the polls public on the site, or keep them private to share only with a targeted customer list. You will be able to see real-time results on each survey in the Spruance Web Controller.

Site Membership

Sometimes you need to know who is who on your website. With site membership you can! Allow guests to signup into custom groups that you will create, or only allow ones that you select. Once as members of these groups, these users will be able to login to a special area of your site and be able to access pages of data that you will restrict only to them. This is the perfect way to keep tabs on the information and to whom it is presented to on your website.

With the site membership tools you will have new pages for Login, Logout, Forgot Password, and Profile. You will also be able to control all group access to each individual person using the CRM feature included in the Spruance Web Controller.

Dynamic Storefront

Take your sales success online! With our dynamic storefront we give the power to you. This fully dynamic solution allows you to create unlimited items and in unlimited categories. Have unique features with any item like a size or color to a shirt? No problem! You are able to add multiple features to each item, and then allow them to alter the price of the item. We built the store to give you the most flexibility in order to sell whatever you would like, without any trouble.

All sales are processed online and you will receive an automatic email alert with the details of the order. Keep your customers informed on their status by giving alerts to the process easily through the store manager feature of the Spruance Web Controller. Your customers, by logging into your site, will be able to view the status of their orders. They will also be able to see a past history of their orders as well.

Message Center

Provided in our Extranet solution is an internal message system. We have found that companies need to be able to reliably send sensitive messages to each other, especially when they are spread across a great area. The message center is for internal traffic, allowing any authorized user of the Extranet to quickly send messages to one or more members of the company. They are also able to send out messages to entire groups, or the entire company with a single click. This is a must have tool for companies that need to communicate internally and efficiently.

File Manager

One of the biggest complaints that we have heard when dealing with organizations is file sharing. In today's technology world, even small companies have hundreds or more files that they use to keep organized. This can be a problem even if the company is in a single office, but becomes a big issue if that company is spread out. Leave the days behind when your file manager is a collection of email attachments and let me introduce you to the Extranet File Manager. With the file manager you are able to access all your company documents from any internet connection.

The file manager allows you and your employees to upload documents and share them with the entire company. Your files are tied to you, so that your team will be able to see who submitted the file, what type it is, and when. Each file has permissions whereby you may or may not allow other team members to remove or move the file. With this many files, you need to keep them organized. You are able to create an unlimited number of folders to hold those files.

By keeping all your files in a secure location, there is no longer any worry about a single computer going down. We have our servers backed up daily to ensure that your data is protected. Our servers are located in a secure data center with redundant power, connectivity, and fire suppression. We take the fact that you are trusting us with your files very seriously and work hard to ensure they are secure and protected.

VIII. Spruance Web Controller

The Spruance Web Controller is a custom built website content controller built by Daslos Studios.

Spruance allows authorized users the ability to securely change most of the content on their site.

The Spruance Web Controller has many functions including:

Content Area Editor:

-A Content Area is an area on the site where you will have the ability to enter text, images, or multimedia. There is no need to know HTML or any other coding languages. You will find the interface similar to Microsoft Word with a simple editor. Dropping in images, or other multimedia is as simple as a point and click.

File Management System (FMS):

-FMS gives users the ability to upload files to the website. The files can be audio, video, or photos. FMS also will automatically resize photos to make them display with the best quality on the site. Once you have the files in FMS, organize them in your own folders so that you can find what you want, when you want it. When adding any media type on a page, there is no need to remember file names anymore. You will be able to search, preview, and organize all your files quickly and easily with drag and drop technology.

Photo Gallery Manager:

-The Photo Gallery Manager allows the user to quickly take the images that they uploaded using FMS and create custom photo galleries. This gallery manager allows you to just drag and drop images into their desired order and you are set. It is just that simple!

Calendar Manager:

-The Calendar Manager allows users to create events / specials, and assign them to a day, or set them up as a recurring event. Incorporated into the calendar manager are the controls for event registration and reporting.

News Manager:

-The News Manager allows users to input news articles which can include multimedia and photos. The News Manager can set articles to only appear at certain times, or be featured on the homepage of the website.

Contact Manager:

-Keep track of those who are signing up on your website as well as those who are filling out your online forms with the Spruance Contact Manager. This system will allow you to quickly and easily search for people and form information, as well as to export that to Word or Excel.

Customer Relationship Manager (CRM):

-For more advanced looks into your customer and contact base the CRM system is best. CRM allows you to create completely dynamic queries on your contacts based on any fields. You are able to create additional fields and track them on each of your contact records. In CRM you are able to export any list to Excel or Word, and scan through each of them.

IX. Hosting / Recurring Costs

Daslos Studios LLC requires that all of our sites be hosted on our dedicated servers located in a secure datacenter. This is due to security and performance requirements. Our servers are of the best quality and all utilize the latest Microsoft Technology running Windows Server 2008.

What is included in the monthly hosting charge is as follows:

- 500 MB hard drive space
- 8 GB /month transfer

X. Package Costs

	Development Cost	Recurring Hosting
 Daslos Studios SmallBusinessPackage	\$ 1895	\$ 50
 Daslos Studios StorePackage	\$ 2495	\$ 60
 Daslos Studios ExtranetPackage	\$ 3495	\$ 60

**Prices good through August 31, 2009*

Daslos Studios LLC requires 50% of the development cost at the time of the contract agreement. The remainder of the costs will be due upon completion of the project.

The recurring hosting charges for the website will also begin with the project development.

**This development does provide for the incorporation of multimedia elements, to include audio or video files, but does not provide for the production of said audio or video files.*

**Project quote includes a single revision of the project design. Revisions will be billed at the regular rate (\$98/hr) after the second draft has been created.*

XI. E-Mail Blast Marketing

The E-Mail blast marketing tool add-on allows you to directly communicate back with your customers and leads. E-Mail is a big part of doing business in today's world, and this tool allows you to dominate it.

One of the biggest problems with mass E-Mail is that certain internet providers (example: Yahoo, AOL) have strict rules on SPAM and block much of the E-Mail heading their way unless it is done correctly. Our system uses various technologies and other 3rd Party services in order to get your message in their Inbox and not in their SPAM folder. We make it easy for you.

The E-Mail blaster marketing tool add-on also has advanced reports on the E-Mail messages that go out through it. Integrated directly into the user-friendly CRM system, this tool is as simple as they come.

FEATURES:

- Simple Editor Interface
- Detailed Searches
- Full Reporting
- Hyperlink Click Tracking
- Dynamic E-Mail Layouts
- Full HTML E-Mail Templates
- Customized Template for your Company.
